About Technical Data Sheets

Q How is DASMA Technical Data Sheet content maintained?

JOE: Each Technical Data Sheet (TDS) is fully reviewed about every four years by the DASMA division assuming responsibility for the content. Members are given the opportunity to reaffirm, revise, or withdraw the TDS.

Occasionally within a four-year review period, a change to a code or standard—or perhaps input from someone within or outside DASMA—will spur a revision. The proposed revision will undergo a technical review within the responsible division, which then must vote on approval for any changes.

We recognize the importance of keeping DASMA TDS content current. These documents are popular and have been effectively used in the marketplace to enhance knowledge of our industry's products. ■
